A New Community Health Initiative: Community Outreach Teams

**Transforming Care for our Costliest Patients by Investing
in the Social Determinants of Health**

Rebecca Ramsay, BSN, MPH
Director of Community Care, CareOregon

Our Vision: Healthy Oregonians regardless of their income or social circumstances.

- **Publically financed health plan for low-income citizens**
 - Medicaid: Mom’s and Children, Disabled/ Chronically Ill
 - Medicaid/ Medicare “Special Needs” Plan
- **180,000 Members**
- **Not for Profit**
- **Contracted network**
 - 50% safety-net PCPs
 - Diverse private practice PCPs
 - Major metro and rural hospitals
- **Began building population programs for complex members in 2003**
- **Participant in IHI Triple Aim Initiative since May 2007**

Enhanced Primary Care Support Systems for HR/HC Patients

- A high-cost intensive model that is supported by nurse care management (among other resources) along with primary care that often limits their work to a relatively small panel of patients. (Ambulatory ICU)
- A model that primarily focuses on the redesign and retraining of the primary care team. (Southcentral Foundation)
- A model that enhances really good primary care with a new skillset – non-traditional health care workers that take their assistance into the community for HR/HC patients. (CareOregon)

Community outreach workers are paired with primary health homes and specialty practices to enhance the practices' ability to provide individualized "high-touch" support to patients with exceptional utilization

*Staff are hired for engagement skills, compassion, non-judgmental attitude, outreach experience

*Focus is on the social determinants that drive high-cost medical utilization

*Outreach worker is incorporated as part of the practice team, but also has identity with a larger community of practice

* High PCP/Specialist involvement

* Documentation occurs in the practice's EMR; population view and process metrics stored in a community care registry

*Voluntary program

The Secret Ingredients

1. Transparency

- An open/honest conversation changes both participants

2. Trust

- Reducing the hierarchy in the relationship makes it safer

3. Time

- We can only improve on the current system
- You have to know me to help me

4. Tailoring to the Client

- Lack of a conventional agenda driven by payment; regulatory relief

Outreach Worker Interventions

- Motivational Interviewing to resolve ambivalence about health-related behavior change
- Client advocacy within and among multiple systems
- Role modeling advocacy and relational skills
- Assistance in navigating health care system
- Care coordination
- Health literacy education
- Self management skill development
- Assistance with complex problem solving related to living in poverty with multiple health issues
- Providing opportunities to identify as something other than a *“patient”*
- Providing opportunities to experience success and feel confident
- Deep listening, acknowledgment and respect for each individual

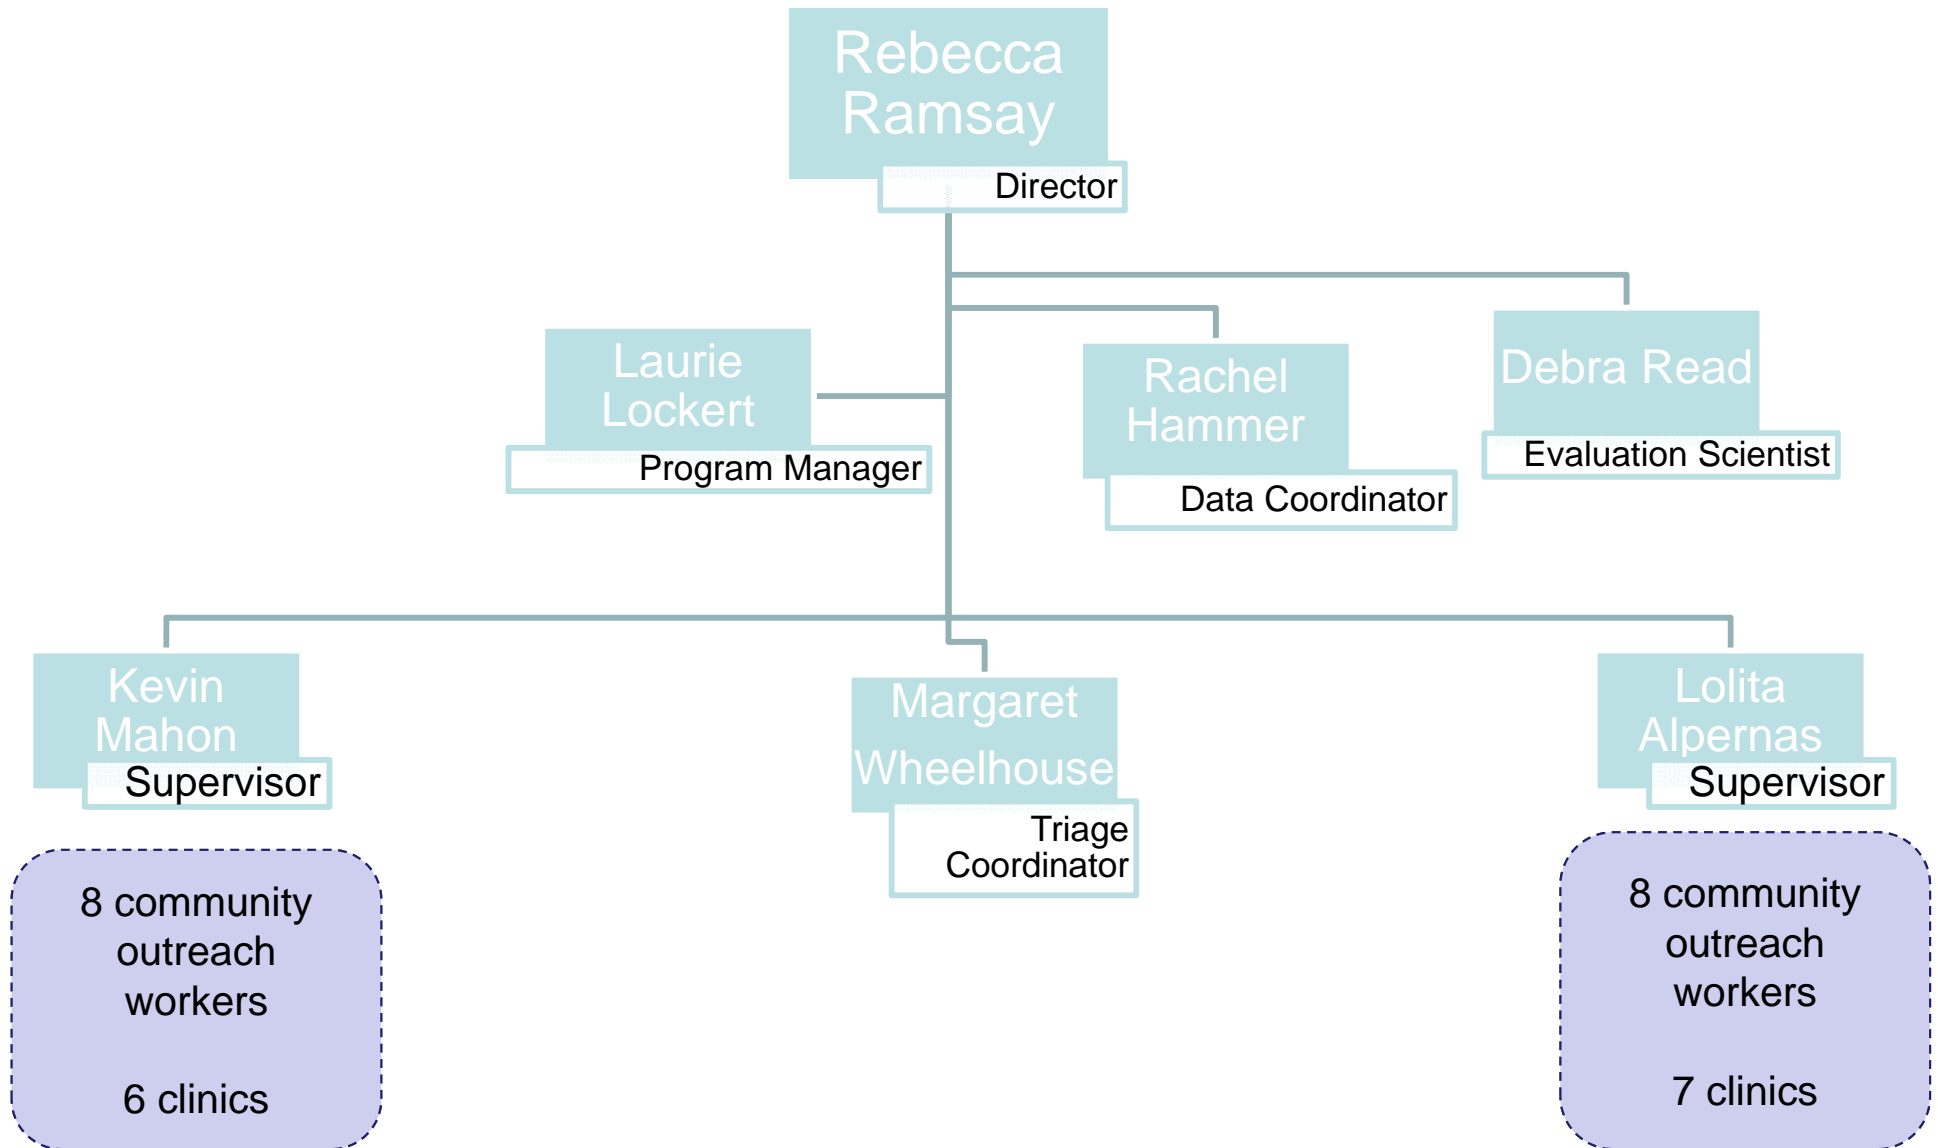

What Makes a Successful Community Outreach Worker

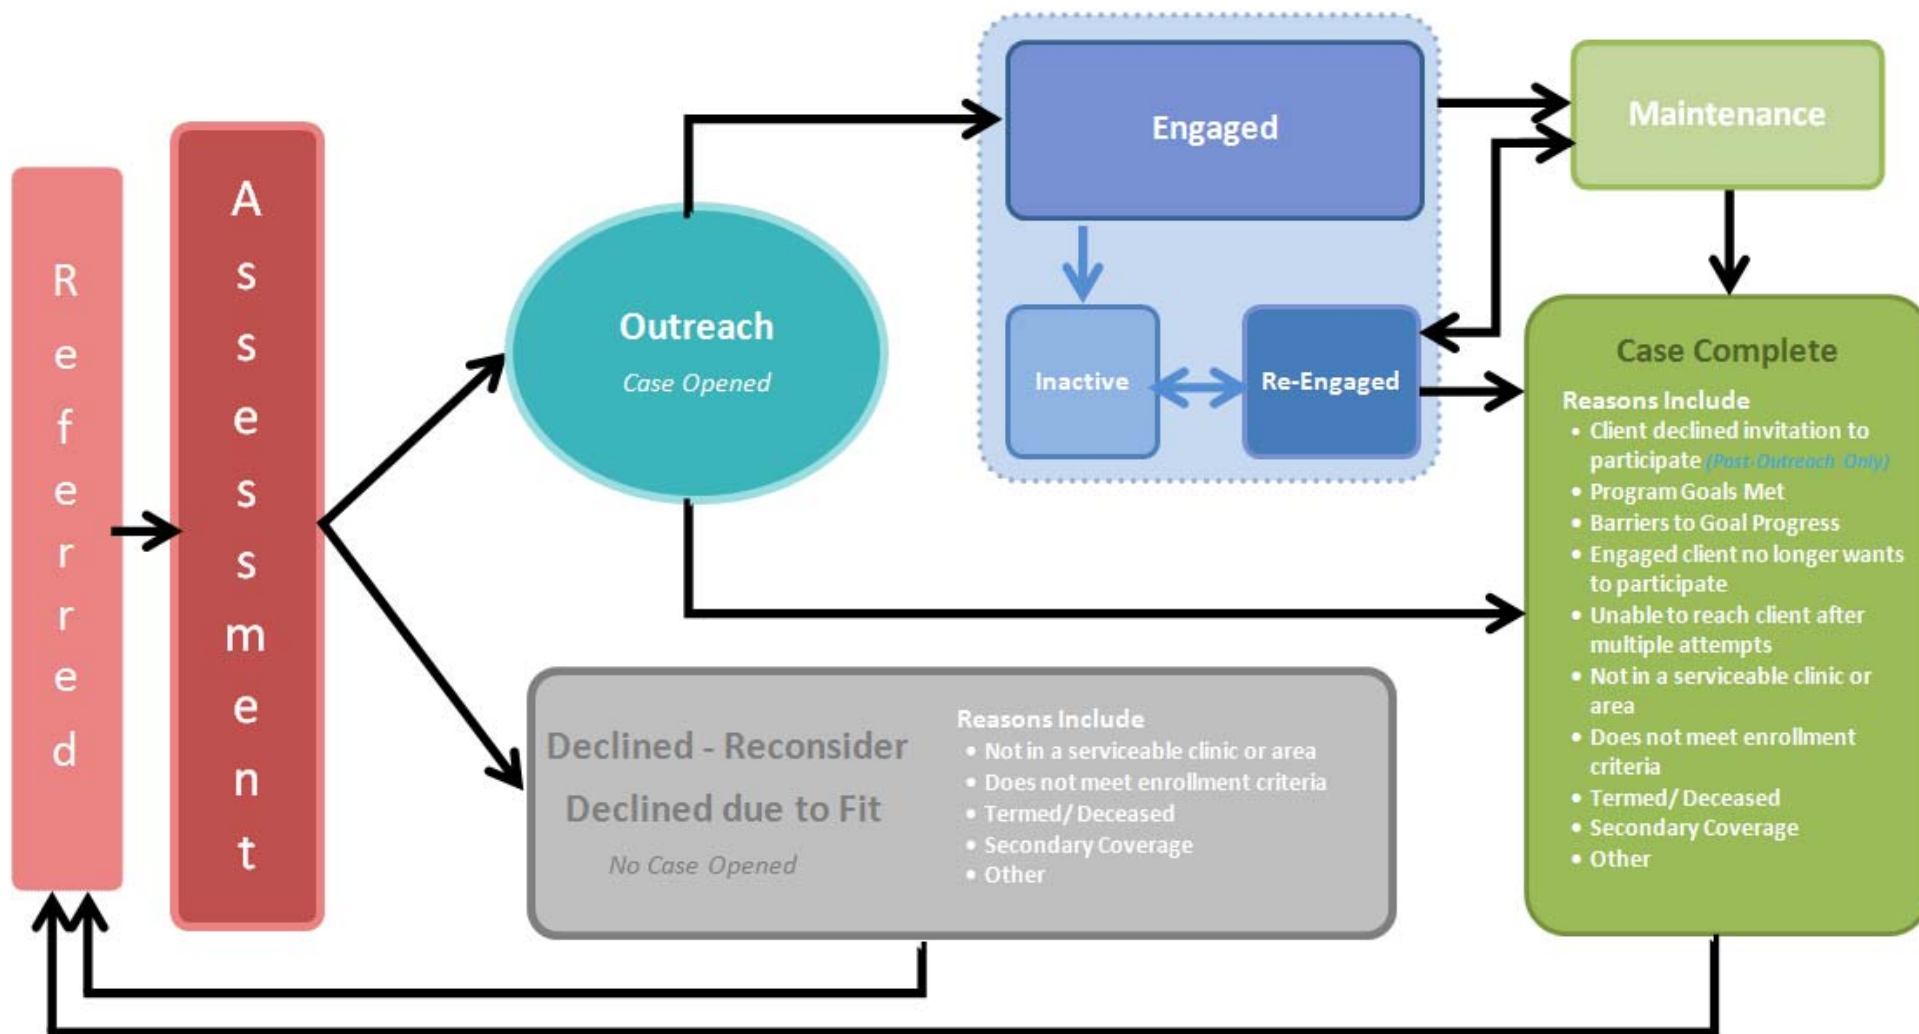

First and foremost, you have to understand the needs of your high-acuity/high-cost population. Given ours, we need:

- Comfort and experience with mental health conditions, addiction and substance abuse, poverty, and trauma
- Excellent interpersonal skills, professional boundaries, and enough confidence and experience to communicate/advocate with medical professionals
- Compassion, non-judgmental attitude, cultural agility, and commitment to social justice principles
- Experience doing home visits – often will visit shelters, group homes, and SNF/Assisted Living sites as well
- Understanding of our community and its resources

Program Structure

Health Commons Community Care Program – Client Status Mapping v.5 updated April 8, 2013

Outreach Worker Caseloads

Engaged

Workforce Development

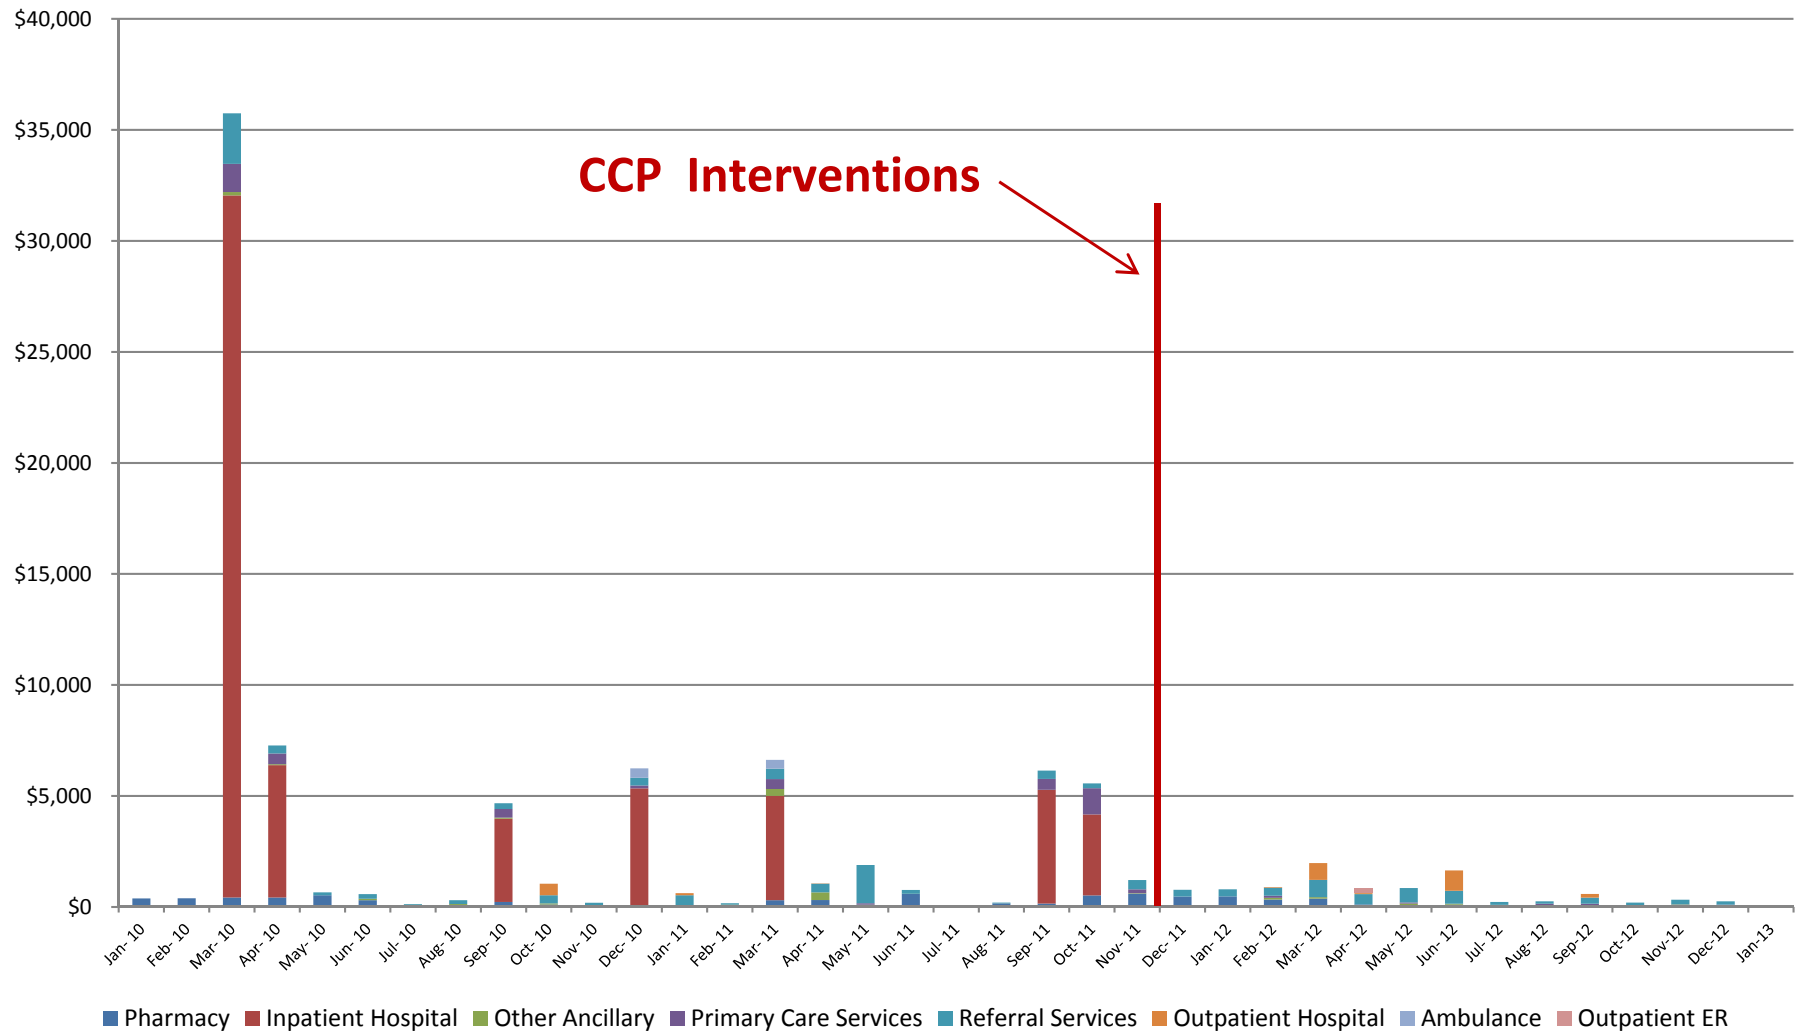

- Motivational Interviewing
- Trauma-Informed Care
- Addiction and Treatment Modalities
- Chronic Dz Fundamentals – Diabetes, CHF, COPD, Liver Disease, Depression
- Severe Mental Health Conditions and Psychotropic Medication Treatment – Schizophrenia, Bipolar, Personality Disorder
- Developmental Disabilities
- Preventing Burnout, Grieving, and Dealing with Death

This may be an artifact of the 13 people included in this analysis that have only a few months of exposure to the intervention. We have also witnessed LOS decrease but need to analyze the data further.

Additional Evaluation Components

- Health status and care experience surveys are mailed (with incentive) to most clients at graduation from the program. Survey was developed by research and evaluation team with a decade of experience surveying Medicaid population.
- Qualitative interviews are conducted with staff and a sample of carefully selected clients on a yearly basis.

Thanks!
