

CURES in Primary Care

Coordination is Key

- It starts with a huddle.
- Who is on your team?
- What systems do you have?
 - How can you use these systems to alert team members?

Alerts at Pre-Visit Huddle

MESSAGE
REFERRAL REQUIREMENTS: Patients w pain not controlled on PHC recommended regimen or w complex regional pain syndrome or other complicated diagnoses. BEST PRACTICES: PAR, Med Use Agreement and UDS at least every 6 months. Effective June 1, 2016, patients who are not taking opioids chronically ("new starts") will be limited to 30 tablets of short-acting opioids in a 90 day timeframe, for an episode of acute pain, without prior authorization. If more than 30 tablets are prescribed or if refills are requested, the pharmacy will need to fill out a Treatment Authorization Request (TAR) which justifies the prolonged use of opioids for acute pain. See PHC Pain Management Protocol for further recommendations. PHP/CMSP long acting only covers MS Contin and Methadone. EKG before starting methadone.
