

There's more to health than healthcare

Healthify is fundamentally rethinking how healthcare organizations and social services work together to connect communities to vital resources. Our founding team of social workers and technologists come from a background of working with at-risk patients in Baltimore hospitals. They saw how social determinants of health (SDoH) - like access to food and housing - dramatically impacted health outcomes in the East Baltimore community and created Healthify.

Healthify's mission is to build a world where no one's health is hindered by their need. To achieve this, Healthify's solutions help health plans, health systems, and government organizations connect communities to resources

Healthify's leading solutions enable users to search for essential social services, track referrals, and coordinate those referrals in real-time to ensure coordinated care and address SDoH.

Search for Resources and Track Referrals

Search for more than 446,000 resources in Healthify's nationwide database of health, community, and social services and track data in one system to better manage SDoH. Healthify's solutions also include robust reporting and analytics to measure outcomes and the success of interventions.

Close the Loop on Referrals

In addition to access to Healthify's database and reporting and analytics features, organizations can coordinate care in real-time with community partners through bidirectional referrals. Through Healthify, organizations are able to manage and close the loop on referrals.
